

Overview

For condensation duties requiring nickel-base Hastelloy materials. Alloy grade and wetted components are selected for the fluid corrosion conditions. Condensing area, flow arrangement, connections and installation depend on duty and site requirements.

Technical Configuration

Item	Configuration
Brand	IKUSE
Material family	Nickel-base Hastelloy; grade selected for the fluid
Process duty	Condensation and cooling
Arrangement shown	Horizontal body with saddle supports
Selection basis	Corrosion conditions, duty, temperature, pressure and allowable pressure drop

Provide full fluid composition, concentration and impurities. Select wetted materials, seals and thermal configuration together with the cooling-side conditions.
