

Product & Technical Configuration

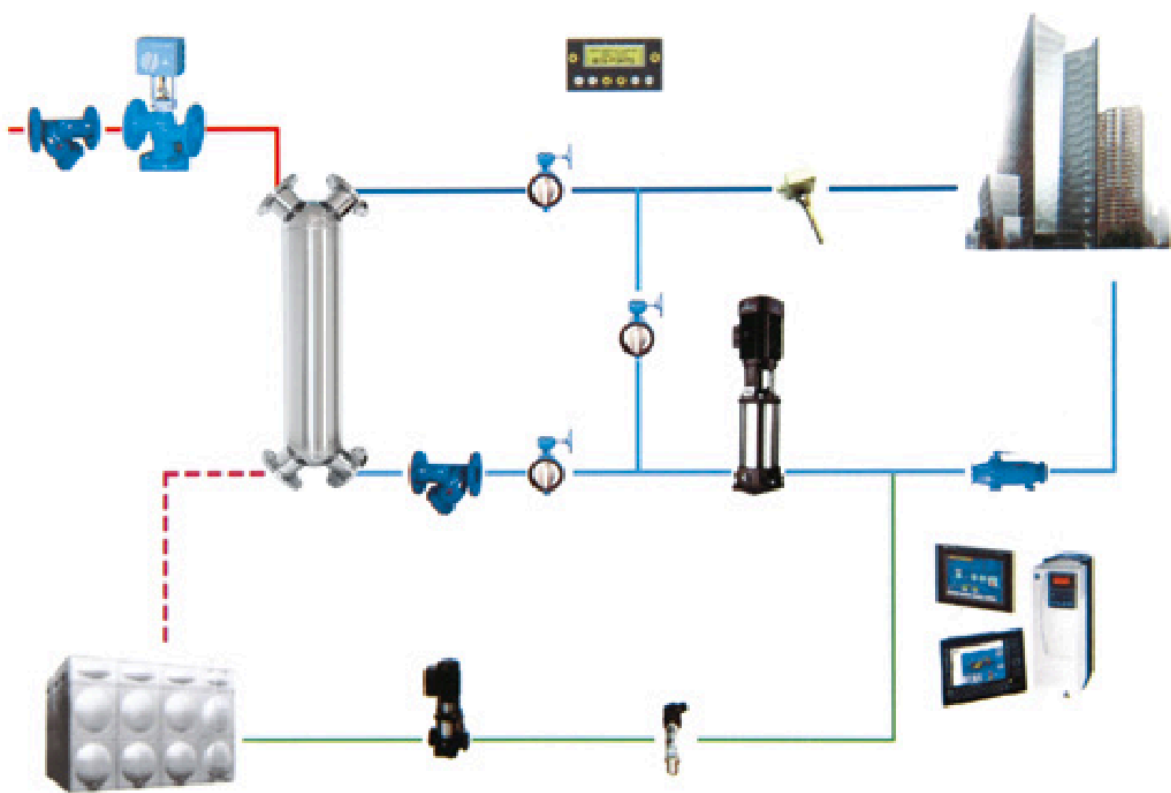

Overview

An integrated package with heat exchangers, circulation and make-up systems, valves, instruments and industrial controls. Used for space heating, district heating, central air-conditioning heat sources and domestic hot water.

Technical Configuration

Item	Configuration
Brand	IKUSE
Package type	Modular integrated unit
Main equipment	Heat exchangers, circulation pumps and make-up pumps
Instrumentation and control	Thermometers, pressure gauges, sensors and industrial control system
Applications	Space heating, central air conditioning and domestic hot water

System Components & Flow

Main Components

Heat exchangers, circulation pumps, make-up pumps, thermometers, pressure gauges, sensors, piping and valves.

The system combines heat exchangers, a circulation loop, make-up water and control instrumentation. Regulation follows the heating demand.
