

Overview

Straight flowline assemblies with integral, welded and different sealed end-connection configurations.

Construction and Configuration

Ends may use matching unions or flanges. Check the rated pressure separately for pressure-thread-seal, non-pressure-thread-seal and integral configurations.

Key Data

Size	Series pressure range	Standard length
1 "–4 "	7–105 MPa	0.5、 1、 1.5、 2、 2.5、 2.8 m

Selection

Specify the length, bore, working pressure, both end connections and fluid. The lowest-rated component determines the allowable pressure of the complete line.
