

Overview

Spring-operated pressure-relief valves for pumps and high-pressure systems.

Construction and Configuration

Opening pressure is set by the adjustment mechanism. Rated working pressure and opening set pressure are different parameters; confirm both for the selected model and system protection requirements.

Key Data

Model	Rated working pressure
AQF02-42、AQF02-105	42、105 MPa

Selection

Specify the system design pressure, required set pressure, fluid and discharge-connection requirements.
